

REDiSAFE™

Mail Backup

How REDiSAFE mail backup works

REDiSAFE will automatically perform the incremental backup once a mail profile is created and by simply performing a "snapshot 📷", you can backup all mails previously received.

REDiSAFE Mail Backup backups instantaneously any changed or new mails the moment it detects them in the selected folders minimizing time-consuming procedures.

Management and executive level workers will spend at least 4 hours a day working with email.

With reference to Ferris Research, USA Today.

Features

- Incremental Backup
- Schedule up to the minute
- Encrypted for better security
- Compressed for better storage space
- Instantaneous recovery
- Simple, quick and direct
