

All you would like to know about

REDiSAFE email plug-in

Q1 What functions or features does the plug-in have?

REDiSAFE email plug-in allows user to schedule their backup for emails in an automated and seamless mode. Restoration can be done simply by selecting the dates from which the emails are to be restored.

Q2 What makes REDiSAFE email plug-in so unique?

REDiSAFE backups all emails immediately without the use of an open file manager. Furthermore, REDiSAFE supports incremental email backup. Incremental backup provides a much faster method of backing up data than backing up the whole mailbox. During an incremental backup, only new emails that are created since the most recent backup are included.

How does the restoration work?

Q3 REDiSAFE email restoration is base on date specified. A new folder base on date will be created thus ensuring that existing emails are not overwritten.

Does REDiSAFE plug-in change or modify user's original data (Email, calendar, & etc) during the process of backing up or restoring?

Q4 No. REDiSAFE mail plug-in does not affect, change or modify any of the user's original data. REDiSAFE email plug-in only makes a copy of the user's original data and encrypts the data.

Can REDiSAFE email plug-in support multiple email profile?

Q5 Yes, REDiSAFE plug-in can support multiple email accounts. However this can only be done in Microsoft Outlook and not in IBM Lotus Notes. This is due to the limitation of the individual software.

Can REDiSAFE email plug-in allow me to restore individual or specific contacts or emails?

Q6 No, the current version of REDiSAFE plug-in does not allow you to back-up or restore individual or specific contacts or emails. REDiSAFE backups the emails by dates and will restore those data likewise.

When REDiSAFE email plug-in is running, will it prevent me from doing my work?

Q7 No, REDiSAFE will not prevent you from doing you work even if you are backing up or recovering your emails. REDiSAFE's mail plug-in works in the background and thus allow users to be able to work even when the REDiSAFE email plug-in is running.

Do you know ?

Do you receive dozens of emails daily with completely blank subject lines? The vast majority contains viruses or spam messages, and due to an overloaded inbox and the impracticality of going through each message individually, the tendency to delete these suspects automatically en masse, in the same way as you would delete other messages containing subject lines that scream spam.

This practice might have cost you great lost in sales as occasionally as you would lose important messages from prospects. If a prospect was taking the time to email you, they were likely to be very interested in purchasing your product - the last thing you would want to do is to miss their message when it arrived. Not only did you miss a possible initial sale, it also left them with a bad impression and they would be likely to steer clear of my products in the future..Thus there is a great importance to back up your emails.
