

Importance of simplicity in data protection solution.

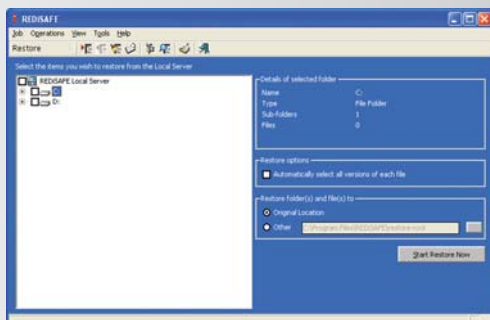

“REDiSAFE’s fully automated backing up solution allows user to have a peace of mind.”

Select
Select the files you wish to backup

Schedule
Specify the backup times

Recover
Restore the files instantly

Backup and recovery of workstations and servers can be a hassle to many. Yet the importance of backing up these information is essential to organizations. Organizations have suffered from real economic loss and the corresponding loss of good-will from valued customers due to data loss..

Let’s say you fire up your PC one day in your office and all you hear is the ominous clicking sound emanating from your hard drive. You start to panic and worry because the important document that your client wants in an hour’s time has been turned into toast by the hard disk.

Or perhaps you did your backup on a tape drive and you thought you are still safe. Then as you search through the large pile of tapes, you were finally able to locate that particular information you required but realize that the tape probably contained out-dated information, or has probably given up on you.

Despite these risks, there are many organizations that still practice backing up their data with tapes. Many organizations are unaware that tape backup operation fails one out of five times due mainly to human error or hardware failure.

Considering these risks, will your company survive in the event of a huge data loss? These risks are indeed real. And the possibility of such an unfortunate incident does not apply only to other organizations. Possibilities are equal in every organization, big or small. Imagine the amount of time and money that must be spent to try to recover back the lost data! . You most probably have to spend even more trying to retrieve those lost information.

REDiSAFE provides simplicity in data protection solution to ease users from the hassle in backing up their data. It takes merely 2 simple steps to ensure total protection for your data - selecting the files to backup and scheduling your backup. Recovery of data is simply a click away! You are able to recovery your data instantaneously.

REDiSAFE’s fully automated back up solution allows user to have an ease of mind. All it requires is minimal input of when and what files you wish to backup. With such a solution, it not only relieves users the discipline needed to backup their data, it also assures the organizations the safety of their data.
