

# REDiSAFE for IT

In a **24/7/365** world, you're always on call and a good day is one where your phone doesn't ring with a new emergency.

REDiSAFE can't stop the disasters — from a coffee spill on a laptop to citywide black-outs and hardware failures to the latest virus destroying weeks of work — but REDiSAFE can fix them faster and better than ever before.

Transform days or weeks of tedious restoration and technical support for upset executives and staff into a single daily email summarizing automated back-ups and user restorations.

All done in the background, scheduled and run automatically.

All done without taking up any of your time.

REDiSAFE sets you free, protects your users and delivers a business solution so affordable, even your CEO will agree.

## Make your life easier

Designed to make life easier for the IT department, REDiSAFE Guardian Servers are built to run automatically and unobtrusively, seamlessly fitting into your network. REDiSAFE's client application runs on Windows, Mac, Linux and Solaris platforms.

Install it in under half an hour with 'plug and protect' deployment. Use REDiSAFE's network installation for mass installation across desktops and laptops, or individually in minutes.

Back-up 1GB of essential data in a blazing 6min 30s on average from a typical office computer REDiSAFE Guardian W30 Testing Review. Individual files are restored almost instantly.

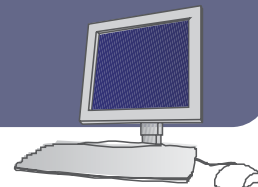

## Make your back-ups safer

REDiSAFE offers industrial-grade security and privacy on robust Linux hardware, with emergency tokens for extra security on individual password-protected vaults with strong privacy codes. During file transfers, the transport layer is secured with industry-proven protocols and algorithms. REDiSAFE's tough security makes it the choice of ministries, government agencies and multi-nationals for highly-sensitive executive back-ups.

REDiSAFE is the proven solution for companies as diverse as Singapore Power, Teleperformance, Keppel Corporation, LanTroVision and Travelex.

REDiSAFE's integrated hardware and software appliance means robust performance and near-zero daily administration for the lowest total cost of ownership with absolutely no compromise in security.

"Designed to make life easier for the IT department, REDiSAFE Guardian Servers are built to run automatically and unobtrusively, seamlessly fitting into your network."

## Make the smart choice

80% of corporate data is in the most vulnerable area: end-users. They have no real technical experience, forget regular back-ups let alone security, and expect the IT department to work miracles instantly.

You can choose to loose your time, staff and budget on maintaining every individual desktop and laptop, or you can cross your fingers and hope nothing goes wrong.

Or you can choose REDiSAFE.

## Make your users happy

REDiSAFE's web client application is designed for business users with little technical knowledge, right down to administrating the entire REDiSAFE system. Some REDiSAFE users even have non-IT staff maintaining their systems after just an hour of training. Users need just minutes to fully understand and use REDiSAFE, thanks to its user-centric design and minimal learning curve.

Users love knowing they're always safely backed-up and being able to restore their own files without calling on the IT department.

Thanks to REDiSAFE's storage scalability, you can cover anyone from branch offices to top executives to the entire company. REDiSAFE's Guardian servers are available in 200GB, 600GB, 1.20TB up to 2TB configurations.

Mirroring data backup is as simple as plugging in another box at a different office.

REDiSAFE's superb after-sales service extends across Asia with offices in over 16 cities for true regional support with dedicated product support officers on-call for you.

Go even further and have REDiSAFE host your back-up boxes in our offices. Our comprehensive SLAs deliver the highest service and performance with no hassle to you.
